The electrician is responsible for connecting power to the fourplex outlets up from the floor or down from the ceiling along the indicated path. Provide a 20 amp, switched outlet for each student station (four per quad island island).

Electrical connections may be made as long as the stub outs fall within the footprint of the base platform. However, some minor modifications may be necessary. Also, electrical power may be ran through the platform bases of adjacent stations.

The quad island includes 20 amp fourplex outlets mounted below the tool panel on the rights ends of all four cabinets. The tools plug into these outlets.
